Final Project Presentations

Objective: Apprentices must give an **8–12-minute oral presentation in English** about their software project. This presentation should include technical and personal aspects of the project, using grammatical structures seen during the course and relevant technical vocabulary.

Structure: The presentation must be organized into **7 blocks**, like this:

- Project Overview
- Origin of the idea
- Project Relevance
- Development Process
- Main Features
- Applied Technologies
- Future Plans

1. Project Overview

Use: *Present Simple + Technical Vocabulary*

Example: Our project is a mobile application that helps users track their daily water intake. It is designed for people who want to improve their health habits.

2. Origin of the idea (How did it come about?)

Use: *Past Simple*

Example: The idea came up during a brainstorming session. We noticed that many people forget to drink water during the day, so we thought we should create a simple reminder tool.

3. Project relevance (Why is it important? What is the impact, relevance and innovation?)

Use: *Present tense*s + *Comparatives/Superlatives + Modals*

Example: We believe this project is important because it encourages healthier habits. It should be used by people of all ages. It's one of the easiest apps for this purpose we've seen.

4. Development Process (How did they work? What methodology did they use?)

Use: *Past Simple / Passive Voice /* Include tools and methodology: Agile, Scrum, Kanban, GitHub, Figma, etc. Use sequence connectors: First, then, after that, finally, in conclusion...

Example: We worked in two-week sprints and used the Scrum methodology. The backend was developed in Node.js and the frontend was built with React. Tasks were managed using Trello.

5. Main Features (Include short description of the app or web page and its main features)

Use: *Present Simple + Technical Vocabulary + Comparatives/Superlatives*

Example: Our app allows users to set reminders, view statistics, and get health tips. One of the most useful features is the daily tracker. It's simpler and more intuitive than other apps we tested.

6. Applied Technologies

Use: *Present Perfect + Technical Vocabulary*

Example: For the development of the project, we have used NoSQL and SQL databases.

7. Future Plans (What's next for the project? What improvements are expected to be applied?)

Use: *Future tenses*

Example: We are going to add a login feature using Google accounts. We also plan to release the app on Google Play in the next two months.

Evaluation

Criterion	Points
1. Fluency and pronunciation	1,0
2. Use of grammatical structures	1,0
3. Technical vocabulary	1,0
4. Clarity of exposition	0,5
5. Organization and coherence	0,5
6. Questions	0,5
7. Time (8-12 min)	0,5
Total	**5.0**

Requirements for the preparation of support material:

All groups must accompany their oral presentation with a presentation in PowerPoint, Google Slides or similar. These slides should visually support the presentation, not replace it. These are the mandatory guidelines:

Format and Content

- The entire presentation must be **completely in English**, including cover, titles, texts and images if they have text.
- Maximum **30 words per slide**. It is recommended to use short phrases, lists or bullet points. **Avoid long paragraphs.**
- Minimum **7 slides**, maximum **15** (not counting cover or acknowledgements).

First slide (cover):

- Project Name
- Names of the members
- Name and number of the program.

Last slide:

- It must display a short video or demos of your application or website.
- Students should end their presentation with a closing sentence or conclusion.

Visual design

- Use template for SENA presentations.
- Use legible and contrasting colors.
- Avoid overloading with text or images.
- Use a good font size (minimum 20 pts).
- Include at least 4 **images or captures of the project** (interface, login page, dashboard, code, architecture, etc.)
- The images must be directly related to what has been explained.

Recommendations for the oral presentation.

- The slides should serve as a visual guide, not a script. Therefore, the slides are not read.
- Students should **explain in their own words** what is summarized on screen.
- All members of the group must have an assigned portion of the oral presentation.
- Individual and collective performance will be evaluated.

EVALUATION RUBRIC – FINAL PROJECT PRESENTATION (SOFTWARE)

Criterion	Description	Points
1. Fluency and pronunciation	Speak clearly, fluency in speaking, few pronunciation errors that do not impede comprehension.	1,0
2. Use of grammatical structures	Correctly uses present, past, future, manners, passive voice, comparatives, and superlatives.	1,0
3. Technical vocabulary	Use appropriate vocabulary from the software area (frameworks, methodologies, functions, etc.).	1,0
4. Clarity of exposition	The project is well presented, functions, tools and decisions are explained.	0,5
5. Organization and coherence	The presentation has a clear and logical structure: introduction, development, conclusion.	0,5
6. Questions	The questions are answered properly.	0,5
7. Time (8-12 min)	Respect the minimum and maximum time.	0,5
	Total	**5.0**

Names	Clarity of exposition (10 pts)	Use of grammatical structures (25 pts)	Technical vocabulary (15 pts)	Fluency and pronunciation (15 pts)	Organization and coherence (15 pts)	Creativity and technical depth (10 pts)	Time (10 pts)	Comments

BANK OF QUESTIONS TO ASK AFTER THE PRESENTATION

About the project

1. What problem does your project solve?
2. Who is the main target user?
3. What makes your app/website different from others?
4. How is your app better than similar ones?
5. What features are you most proud of?

About the development process

6. What technologies did you use to build your project?
7. How did you divide the work in your team?
8. What was the most difficult part of the project?
9. Did you have to learn any new tools or languages for this project?
10. How did you test your app/website?

Methodology and tools

11. What methodology did you follow during development?
12. Did you use version control? How?
13. How did you manage the tasks and deadlines?

Future of the project

14. What are your future plans for this project?
15. If you had more time, what would you add or improve?
16. Do you plan to publish it or use it in real life?

Opinions and reflection

17. What did you learn from this project?

18. Would you like to work on similar projects in the future?
19. What skills did each team member contribute?
20. If you could start again, what would you do differently?
