Alex: Hey Jamie, I'm _____ a new project and can't decide between Python and Java. What do you think?

Jamie: Well, Python is _____ to learn than Java, but Java is _____ for big applications.

Alex: Really? I thought Python was _____ language right now.

Jamie: It is! But for performance, C++ is _____ of all. Still, it's _____ to write than Python.

Alex: What about JavaScript? I need something for web development.

Jamie: JavaScript is _____ than Java for websites, but TypeScript is _____ for big projects.

Alex: Hmm... So Python is _____ for beginners, C++ is _____ and JavaScript is _____ for the web?

Jamie: Exactly! But remember—no language is the perfect choice. It depends on the project!
